

Cobalt Dashboard

The Cobalt Dashboard is an online application used by customers to track activity and manage incidents. Accessible by Cobalt's customers at any time, from anywhere, they can now gain full situation awareness in their locations that Cobalt services.

The main dashboard gives customers a high-level overview of current activity, pertinent events for review, and information. Customers use this screen to get a real-time view of what their Cobalt Robot's cameras and sensors see.

Customers also use the Cobalt Dashboard to access a comprehensive archive of all events captured by Cobalt, including descriptions of what occurred and relevant downloadable multimedia.

Access Easily

Customers can log into Cobalt Dashboard anytime, anywhere, through any internet-connected device.

Stay Informed

Issues requiring real-time mitigation follow follow post orders and escalation protocol, but all logged events also display on the Cobalt Dashboard for customer resource.

Act on Data

With a comprehensive archive of all Cobalt-captured events, customers have better reports and actionable data to improve security and facility operations.
